

Visit Future Delivery at the ITS World Congress

Future Delivery is one of more than 40 startups that will be represented at the ITS World Congress. At the world's largest congress for intelligent transport and traffic systems, which will take place in Hamburg from October 11th to 15th, Future Delivery will present itself in the startup area at booth 39. Here we will explain our technology, answer your questions and also be happy to network with you.

The Future Delivery team is looking forward to exhibiting its proprietary technology at such a high-profile conference and sees participation as an opportunity to validate the technology and find potential partners and customers.

We are looking forward to your visit at our booth 39.

About us

Future Delivery is a project to develop a technology to exchange packages in the air between two drones. In the first step, Future Delivery is developing a way to physically and securely connect drones in the air. Exchanging packages in this way makes it possible to combine the advantages of individual drone types. The development team has been working on the idea since 2020, which was submitted to the German Patent and Trademark Office in September of 2021.
