

Package Transport

In urban areas, where traffic jams and space to rent is unavailable or atrociously expensive having a solution that can deliver without relying on either is yet to be seen on the market. With our concept of coupling drones, it is possible to cover whole urban areas from one outside hub – allowing customers to choose between large portions of products.

When looking at drones from a cost perspective, there are savings to be made. By using drones' companies can lower their costs of delivery by 70% when using drones. When combining the cost savings with our ability to utilize the individual drone types' strength between higher range, faster delivery & no traffic jams, our concept offers a superior urban delivery solution.

Therefore, it is possible to

- Coverage of entire urban areas from an outside hub
- Savings in delivery costs due to reduction in personnel costs
- Delivery within one hour becomes possible due to avoided traffic
