

Patent submission Future Delivery

Future Delivery has filed its patent application with the German Patent Office in September 2021. Future Delivery has filed a patent application with the German Patent and Trademark Office for the coupling technology. This patent secures the intellectual property of Future Delivery and was developed in cooperation with Grünecker Patent- und Rechtsanwälte from Munich. The filing of the patent allows us to present the coupling mechanism to the public and to search for partners and investors.

About us

Future Delivery is a project to develop a technology to exchange packages in the air between two drones. In the first step, Future Delivery is developing a way to physically and securely connect drones in the air. Exchanging packages in this way makes it possible to combine the advantages of individual drone types. The development team has been working on the idea since 2020, which was submitted to the German Patent and Trademark Office in September of 2021.
